Effective Date: Products with manufacturing date codes of 1523 or newer.

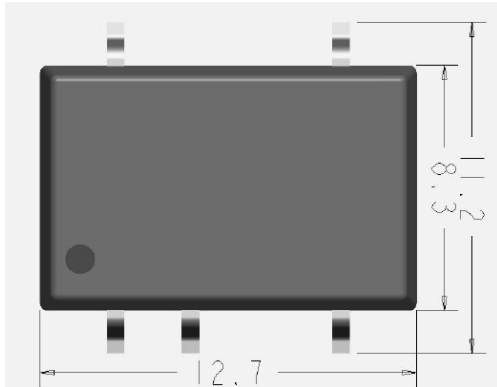

Description of change: Aimtec will be changing the plastic packaging material used to produce the cases on the above mentioned products to fully automate the manufacturing processes of plastic packaging, cutting, bending and tube packing equipment. Furthermore, there will be 2 polar points of AM1LS-NZ series plastic packaging with centralizing stopper on the first pin point side.

On the bottom of AM1DS-NZ series plastic case a new centralizing stopper will appear.

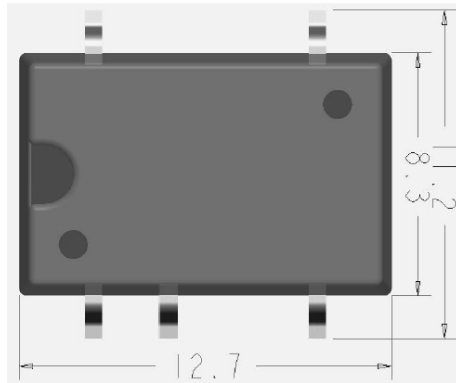

Reason for change: To increase the production capacity, Aimtec engineering has taken the opportunity to introduce an automated plastic packaging manufacturing process. These added centralizing stoppers are essential part for the machines setup.

Customer Impact: Most customers will not be affected by this case difference, as it is a minor change that reflects only to the physical product appearance. There are no other impacts to product performance, or EMC.
